

Federal Salaries in Mexico

Mariana Santos

Hypothesis 1: Salaries vary significantly according to the state.

Hypothesis 2: Salaries exhibit temporal variations influenced by economic cycles.

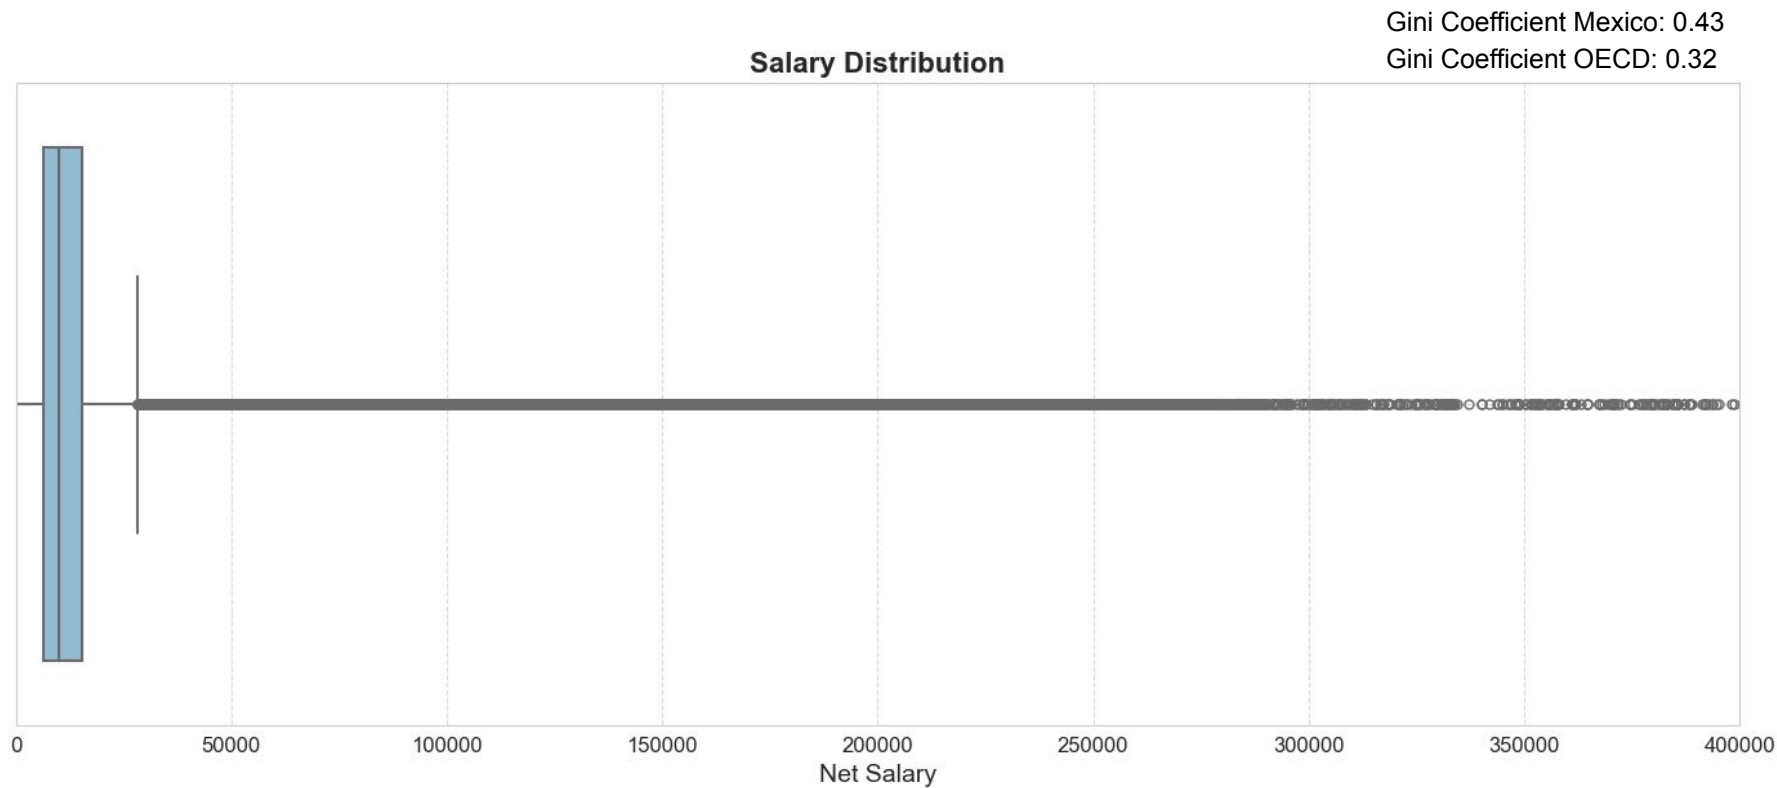

Hypothesis 3: Salaries follow a non-uniform distribution with potential inequalities.

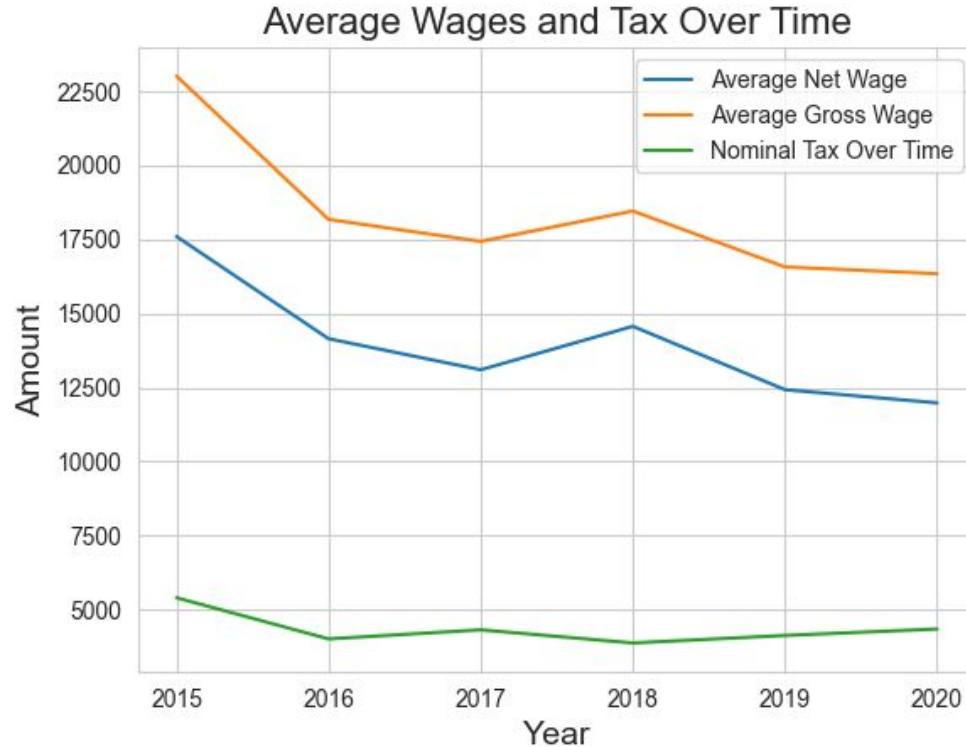

Gini Coefficient Mexico: 0.43
Gini Coefficient OECD: 0.32

Hypothesis 3: Salaries follow a non-uniform distribution with potential inequalities.

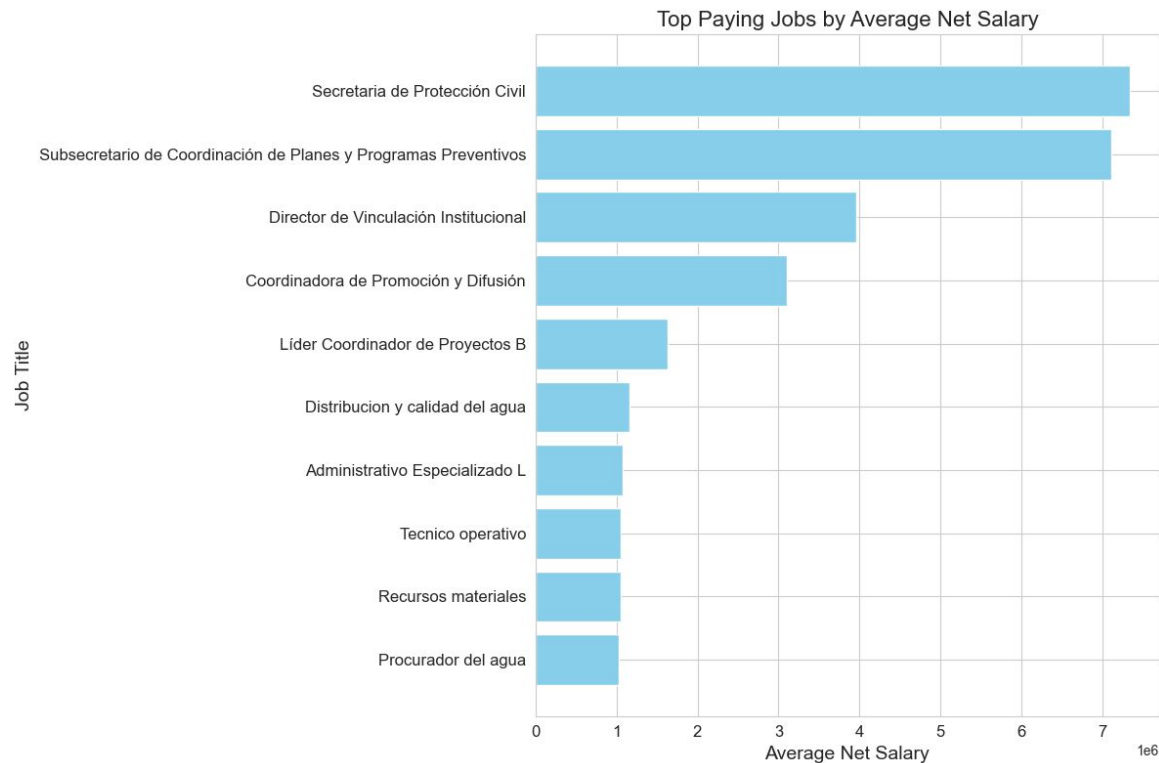

Hypothesis 4: Over time, salaries have undergone changes along with fluctuations in tax rates.

- Change in tax policy
- Change in tax brackets

Hypothesis 5: Certain occupations are likely to be identified as top-paying jobs.

Major Obstacles

Thank you!
